2010 Maintenance Program

Funding Source – State Highway Fund and Act 176 Funds

The goal of the Maintenance Division is to preserve or improve the condition of the State Highway System through the effective and efficient use of the resources provided. The performance measures used to determine the level of service are defined in the Department's Maintenance Assessment Program (MAP). This program evaluates a statistical sample of 0.20 mile segments and determines the level of service for the maintenance of seven major system elements. Those elements and levels of service are:

<u>Maintenance Element</u>	<u>2008 LOS</u>	<u>Present LOS</u>	<u>Min. Acceptable LOS</u>
• Pavements	F	F	C
• Shoulders and ditches	C	C	C
• Drainage structures	D	D	C
• Roadsides	D	D	C
• Signs	D	C	C
• Pavement markings	F	D	C
• Guardrails	B	B	C

Note: This past year has seen an increase in the level of service in signs and pavement markings. This is due in part to the recent increases in the maintenance budget and additional emphasis placed on these safety related areas.

Levels of service (LOS) are defined as:

- **Level of Service A (best)** - This is a very high level of service in which the associated features are in excellent condition. Very few deficiencies are present, all systems are operational, and the overall appearance is pleasing. Preventive maintenance is a high priority in all maintenance activities.
- **Level of Service B (good)** - This is a high level of service in which the associated features are in good condition. Very few deficiencies are present in safety and investment protection, but moderate deficiencies may exist in other areas. All systems are operational. Preventive maintenance is a high priority for safety-related activities, but is deferred for other areas, resulting in additional corrective maintenance activities.
- **Level of Service C (fair)** - This is a fair maintenance service level in which the associated features are in fair condition. Very few deficiencies are present in safety related activities, but moderate deficiencies exist for investment protection and significant aesthetic related deficiencies. Preventive maintenance is deferred for many activities except safety-related work. Corrective maintenance is routinely practiced for all activities. A backlog of deficiencies begins to build up that will have to be dealt with eventually, at a higher cost. Some roadway structural problems begin to appear due to long-term deterioration of the system.

- **Level of Service D (poor)** - This is a low maintenance service level in which the associated features are in generally poor condition. Moderate deficiencies are present in safety-related activities and significant deficiencies for all other activities. Very little preventive maintenance is accomplished; maintenance becomes very reactionary and places emphasis on correcting problems as they occur. A backlog of deficiencies exists. Safety problems begin to appear that increase risk and liability, and significant structural deficiencies exist that accelerate the long-term deterioration of the system. The overall appearance of the system is poor.
- **Level of Service F (worst)** - This is a very low service level in which the associated features are in poor and failing condition. Significant deficiencies are present in all maintenance activities. The overall appearance is not aesthetically pleasing. Preventive maintenance is not practiced for any maintenance activities. Maintenance is totally reactive and places emphasis on correcting problems as they occur. Significant backlogs of maintenance deficiencies exist. Excessive safety problems occur.

The maintenance budget for fiscal year 2010 is \$392,662,591 and is comprised of the following eight (8) basic categories:

- Routine maintenance activities - \$271,294,591
- Extraordinary maintenance - \$4,000,000
- Pavement improvement and preservation - \$75,000,000
- Maintenance support - \$4,750,000
- Bridge maintenance and replacement - \$9,641,000
- Maintenance equipment replacement - \$20,500,000
- Rest area and welcome center maintenance - \$6,900,000
- USDA beaver management program - \$577,000

Even though this represents an increase of approximately \$26.6 million over the 2009 budget, it still falls significantly short in providing the maintenance needs necessary to provide a “C” level of service. The Maintenance Assessment Program indicates that to achieve a level of service “C” would require a level of funding equal to \$769 million. This would eliminate some of the backlog of maintenance items that presently exists. Once achieved, it would cost approximately \$743 million per year to maintain a “C” level of service. The eight basic categories are defined below.

Routine maintenance activities – consists of the everyday activities to maintain the state’s roads, bridges, and associated appurtenances at a given level of service. These activities are usually proactive planned activities but also include reactive activities that are in response to accidents, natural disasters and normal infrastructure deterioration. These activities are performed with Department and contract forces. Routine maintenance activities include, but are not limited to, signage of routes, pavement markings, replacement and installation of guardrail, repair and installation of traffic signals, chip seal and other pavement preventive maintenance activities, repair of existing sidewalks, mowing, repair of drainage structures, and shoulder and ditch maintenance.

Extraordinary maintenance – unforeseen major repairs to roads and bridges that are beyond the capabilities of the Department’s maintenance forces to accomplish within their existing operating budget. This may also include participation in County or Municipal drainage projects or other infrastructure improvement projects that are within the Department’s right-of-way.

Pavement improvement and preservation – the reconstruction, rehabilitation, and preservation of roads on the state highway system. Roads are selected for inclusion in the reconstruction and rehabilitation programs using data from the Department’s Pavement Management System and other objective and quantifiable factors approved by the SCDOT Commission. Reconstruction usually includes the replacement of the entire pavement structure, while rehabilitation involves adding structural capacity to the pavement. Preservation includes the application of lower cost preventive maintenance treatments on pavements in good condition to preserve and extend the life of the pavement. Roads are selected for preventive maintenance by the resident maintenance engineer and approved by the district. These treatments include crack sealing, chip seal, microsurfacing and ultra thin lift asphalt overlays (100 lbs/sy or less). The goal of pavement preservation is to select the right treatment for the right road at the right time.

Maintenance support – includes temporary services and overtime; environmental, hydraulic, and training contracts for things such as underground storage tank replacement, third party environmental audits, drainage studies, and employee training.

Bridge maintenance and replacement – includes the asset management contract for the Arthur Ravenell and other significant bridges in the Charleston area as well as small bridges scheduled for replacement by the Department’s bridge maintenance crews.

Maintenance equipment replacement – includes the replacement of existing maintenance equipment such as dump trucks, motor graders, backhoes etc.

Rest area and welcome center maintenance – includes utilities, cleaning services, landscape services, and building maintenance cost for the rest areas and welcome centers across the state.

USDA beaver management program – includes the trapping and removal of beavers and beaver dams by the US Department of Agriculture in eleven counties throughout the state. This program has proven very cost effective in preventing damage to roads and bridge structures due to flooding that occurs as a result of beaver activity.

**2010 State Funded Roadside Improvements
Secondary Route Raised Pavement Markers
\$1,500,000**

Projects are let annually to replace one-third of the raised pavement markers on non federal aid secondary routes. These projects are funded with state funds and are in compliance with the Manual on Uniform Traffic Control Devices.

State Funded Secondary Route Raised Marker Replacement Projects – Seven district wide contracts are let annually to replace raised markers on low volume, rural roads throughout the state. Raised markers are scheduled for replacement every three years and for 2010, \$1.5 million will be dedicated to replacing raised markers.

State Funded Rural Road Safety Program

This program, formerly known as CRISOS, is being revised to improve safety on rural 2-lane roads in South Carolina by reducing the number of crashes, injuries, and fatalities through the implementation of low-cost, short-term engineering strategies. Project selection for this program will begin with crash research and analysis of all 2-lane rural roads including primary routes within South Carolina and then determine which roads have a statistically higher than average crash rate and/or severity rate.

Beginning with the roads exhibiting the worst crash and /or severity rates, each road will be further examined to identify potential projects for this program. These studies will include the identification of any and all appropriate countermeasures and determining the feasibility of the implementation of the proposed improvements. Project selection and prioritization will then be based upon the results from these studies.

In addition, project selection may also give consideration to environmental impacts and the SCDOT strategic highway safety plan objectives as well as input from the district engineering staff, law enforcement, and the public.

Funding for FY 2010	\$16,000,000
---------------------	--------------

Breakdown of FY 09-10 Operating Budget Total \$1,443.6

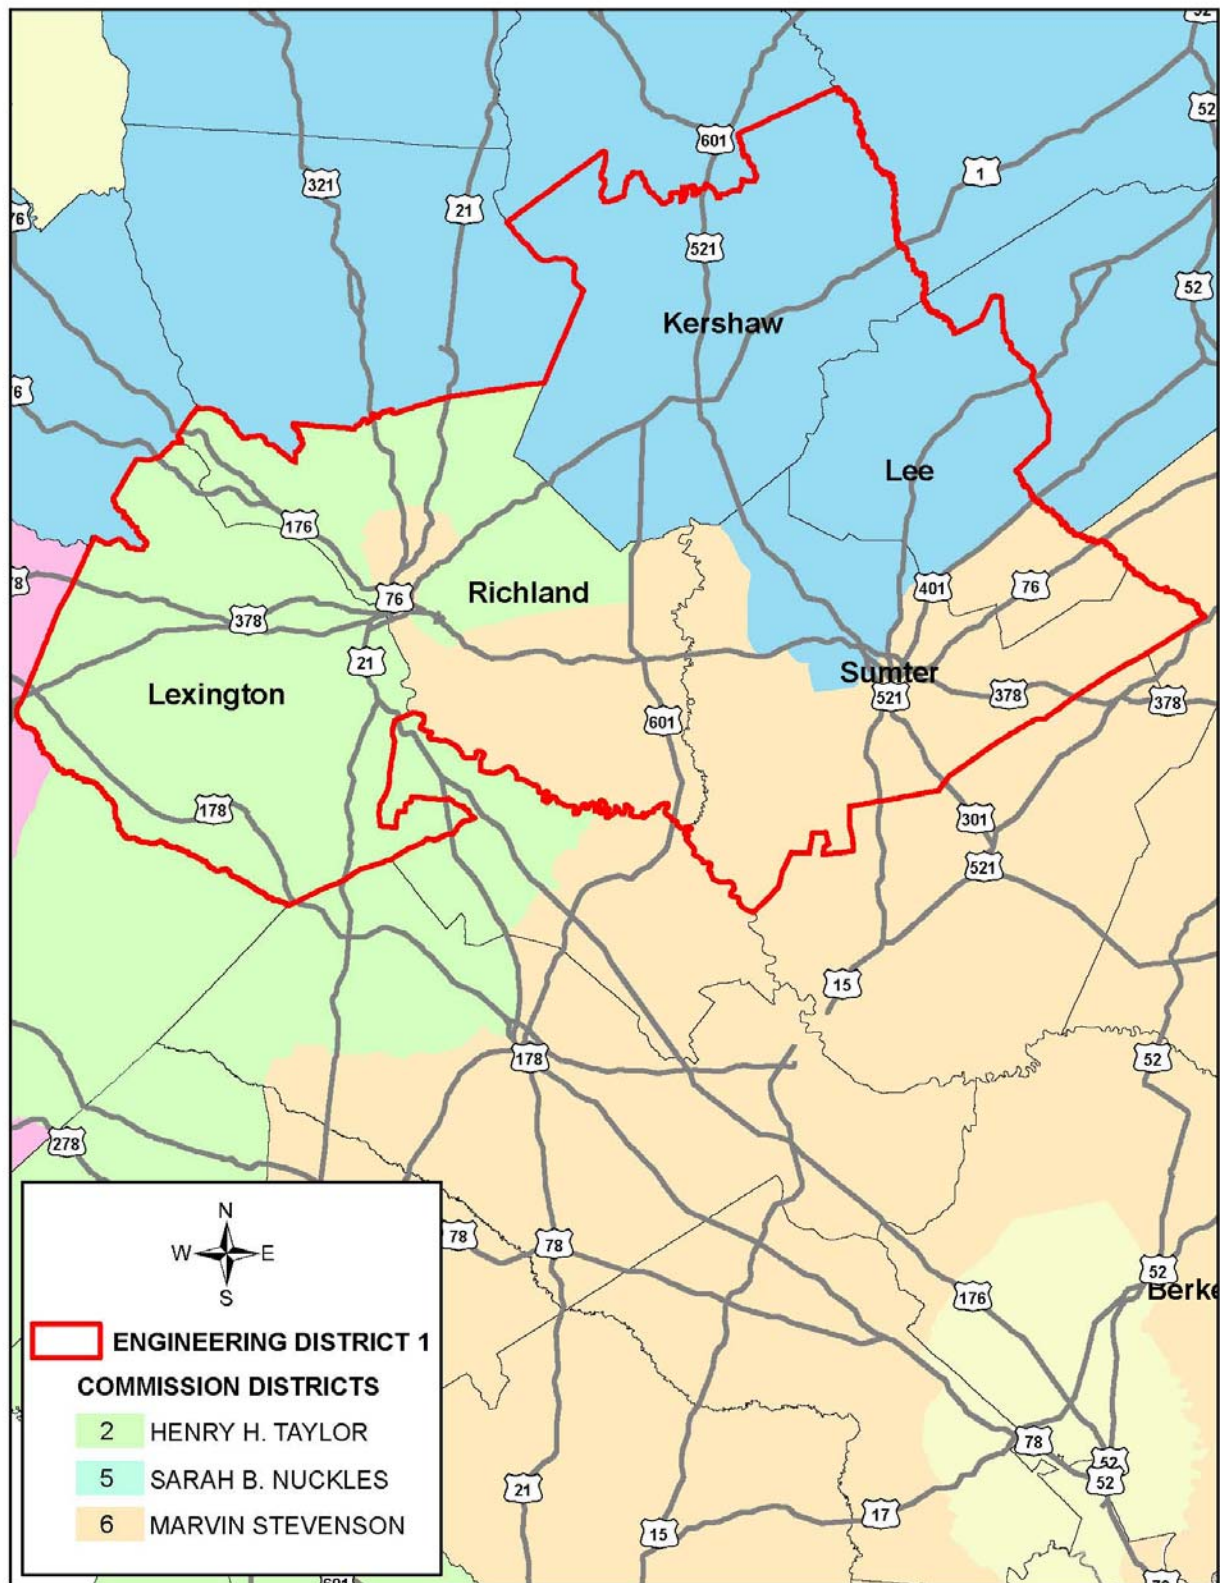

Engineering Districts

There are seven Engineering Districts in South Carolina. Each district is comprised of four to eight counties and may cover several congressional districts. Funding is distributed to the districts based not only on needs, but on the number of lane miles and vehicle miles traveled in each district. Districts develop their own maintenance plan based on the results of the Maintenance Assessment Program and direction from the Director of Maintenance Office.

The following is a summary of the District Programs.

2010 Funding for Engineering Districts for Routine Maintenance	
District	Funding
One	\$43,650,224
Two	\$38,387,833
Three	\$38,528,123
Four	\$34,025,076
Five	\$46,229,094
Six	\$37,735,089
Seven	\$32,739,152
	\$271,294,591
